SUMMARY

Software engineer and team lead with three years building production systems for fintech, GPS/IoT and AI platforms, plus two earlier years in IT operations. I own features end to end, from accessible React and Next.js interfaces through NestJS and Prisma APIs to the self-hosted infrastructure they run on, and I treat security as the second half of the job rather than a final check. On Trakkam, a multi-tenant fleet SaaS I architected, I added SAST, dependency and secrets scanning that took production dependency vulnerabilities from 104 to 0 and secrets in git history from 15 to 0, and caught a deploy gate that was failing open.

SKILLS

Frontend: React, Next.js, TypeScript, Tailwind CSS, shadcn/ui, GSAP, Framer Motion, React Hook Form, Zod

Backend and data: Node.js, NestJS, Prisma, MariaDB/MySQL, PostgreSQL, MongoDB, Supabase, REST, WebSockets (Socket.io)

Infrastructure: Docker, NGINX, PM2, GitHub Actions, Linux, Let's Encrypt, VPS self-hosting, Vercel

Application security: secure SDLC, threat modelling (PASTA, STRIDE), secure code review, SAST (Semgrep), SCA (Trivy, Dependabot), secrets scanning (Gitleaks), WAF tuning (ModSecurity, OWASP CRS), RBAC and tenant isolation, OAuth2/OIDC, JWT

Standards: OWASP Top 10, OWASP ASVS 5.0, NIST CSF, WCAG 2.2 AA, Core Web Vitals

Languages: TypeScript, JavaScript, Python, Bash, SQL, PHP

Collaboration: team leadership, mentoring and intern supervision, code review, technical writing, stakeholder communication, remote delivery

EXPERIENCE

SafulPay | Freetown, Sierra Leone

Software Engineer, Frontend · Feb 2024 to Present

Digital payments platform with 10,000+ users and 1,300+ agents on iOS and Android.

- Raised the corporate website's Lighthouse scores from 68 to 100 in all four categories in a seven-day solo sprint, by re-platforming it to Next.js with code splitting, lazy loading, image optimisation and accessibility fixes.
- Led and built the agency banking dashboard that field marketers use to onboard and verify agents and merchants, with KYC document capture, role-scoped views and activity monitoring, supporting a network of 1,300+ agents.
- Engineered the v2 frontend architecture in React and TypeScript with the Go backend team, covering API contracts, authenticated sessions and complex client state.
- Rejected malformed input before it reached the payments API by validating every onboarding and dashboard form with Zod and React Hook Form at the client trust boundary.

Tech N' Goodwill Limited | Freetown, Sierra Leone

Software Engineer and Team Lead · May 2023 to Present

Software company of 25 staff. Incubated SafulPay before its 2025 spin-off; builds Trakkam.

- Lead the 6-person engineering and IT team across 6+ web applications, turning business goals into scoped plans and explaining technical risk in plain language so managers can decide on cost, time and priority. Trained and mentored 15+ engineers and interns.
- Architected and shipped Trakkam, a multi-tenant GPS fleet SaaS (trakkam.com), end to end: Next.js, NestJS, Prisma on MariaDB, Socket.io tracking, Mapbox geofencing and a 7-tier role model enforcing tenant isolation, self-hosted for about 8x less than the managed equivalent.

- Took Trakkam's production dependency vulnerabilities from 104 to 0 and secrets in git history from 15 to 0 by adding Semgrep, Trivy and Gitleaks to CI with a policy set from a measured baseline, then caught the deploy gate reading a cancelled scan as a pass and made it require explicit success.
- Fixed 11 security issues in one hardening pass after reviewing the codebase by hand, including an XSS sink in map popups, timing-unsafe CSRF checks and an account-takeover path in Google account linking.
- Restored Trakkam after an 8-hour outage by tracing it to MySQL reverse-DNS host authentication, then made every deploy reversible with a CI migration gate, pre-deploy backups and one-command rollback.
- Cut code review turnaround by 30% by standardising Git and GitHub workflows with structured pull requests and review gates.

Nimble Capital Limited | Abeokuta, Nigeria

IT Specialist · Feb 2021 to Dec 2022

- Ran day-to-day technical operations, keeping systems up and supporting staff across endpoints and internal tools.
- Turned customer and operational data collected over WhatsApp into structured Excel and PDF reports for management, and automated the collation behind them.

PROJECTS AND SECURITY LABS

CI/CD Security Pipeline | lawaloyinlola.com/security/labs

- The Trakkam pipeline rebuilt as a public, reproducible guide on OWASP Juice Shop: SAST, SCA, container and full-history secrets scanning, every finding triaged, and a deploy gate that only accepts an explicit pass.

WAF Runtime Defence | lawaloyinlola.com/security/labs

- ModSecurity and OWASP CRS measured against a no-WAF control. 14 of 20 attacks stopped with 0 of 9 legitimate requests blocked at tuned paranoia level 1, and the attack classes no rule can see documented.

appsec-protocols | github.com/lawalOyinlola/appsec-protocols

- 82 security, legal and kickoff controls packaged as agent skills that load before an AI coding agent writes auth, uploads, payments or deploy config. Every control has one executable check, enforced in CI and mapped to OWASP ASVS 5.0.

MarketGist | Next.js, Inngest, MongoDB, Gemini · marketgist.vercel.app

- Stock dashboard with watchlists, price alerts and AI news summaries generated from background jobs.

CERTIFICATIONS

- Google Cybersecurity Professional Certificate, Google via Coursera, Jul 2026.
- TryHackMe Cyber Security 101 and Pre Security learning paths, Sep 2026.
- HNG 12 Internship, Frontend Track Finalist, top 432 of 11,285 participants, Apr 2025.
- In progress: TryHackMe Security Engineer path, CompTIA Security+.

EDUCATION

- **Higher Diploma in Science in Computing (NFQ Level 8)**, Griffith College, Dublin, Ireland · admitted, Feb 2027 to Feb 2028
- **Diploma in Frontend Engineering**, AltSchool Africa, Lagos, Nigeria · Mar 2023 to Feb 2024 · 95/100
- **BSc Animal Nutrition**, Federal University of Agriculture, Abeokuta, Nigeria · Sep 2016 to Oct 2021
